Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

and

Disclosure; Page 63-72; 103pp; English.

The present sequence is given in a specification providing sequences and partial sequences for three types of mammalian (human and rat) T-type calcium channel subunits. An expression cassette has been generated which comprises a nucleotide sequence encoding a T-type calcium channel alpha_1 subunit operably linked to control sequences to effect its expression. The novel calcium channel nucleic acids and proteins are useful for treating conditions characterised by undesirable levels of T-type calcium channel activity such as cardiac hypertrophy, cardiac arrhythmia, hypertension, sleep disorder and epilepsy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a rat T-type voltage-gated calcium (Ca) channel alpha-1-G designated rCavTla. Voltage gated channels are membrane bound alpha-1-G designated rCavTla. Voltage gated channels are membrane bound glycosylated proteins formed of several subunits. The large alpha subunits form a pore in the membrane that is selective for a given ionic species. Each alpha subunit contains 4 domains (1, II, III and IV) and each domain contains 6 putative transmembrane helical segments (S1-S6). Totamels. Charnels are activated at a lower voltage than L- or N-type channels. Charnels are activated at a lower voltage than L- or N-type channels. Charnetics near threshold, fast include short current time, slow activation kinetics near threshold, fast inactivation kinetics and slow activation kinetics and thumans and rats. Each of the novel CC voltage-gated Ca channel genes from humans and rats. Each of the novel CC channels contains a putative IVS4 region comprising the amino acid sequence AAY14598. Cells expressing the T-type voltage-gated calcium channels. Methods are also disclosed for treating a disease or disorder associated with a deficiency in a native T-type calcium channel nucleic acid, e.g. to treat cardiomyopathy, epilepsy, etc

This sequence represents a rat T-type voltage-gated calcium (Ca) channel alpha-1-G designated rCavTlc. Voltage gated channels are membrane bound glycosylated proteins formed of several subunits. The large alpha subunits form a pore in the membrane that is selective for a given ionic species. Each alpha subunit contains 4 domains (I, II, III and IV) and each domain contains 6 putative transmembrane helical segments (S1-S6). Totannels. Charnels are activated at a lower voltage than L- or N-type channels. Charnels are activated at a lower voltage than L- or N-type clannels. Charnels are activated at a lower voltage than L- or N-type slow activation kinetics near threshold, fast inactivation kinetics and slow tail current. The sequences AAX83481-X83492 represent novel T-type voltage-gated Ca channel genes from humans and rats. Each of the novel contains a putative IVS4 region comprising the amino acid sequence AAY14598. Cells expressing the T-type voltage-gated calcium channel proteins can be used to screen for drugs which affect calcium channel nucleic associated with a deficiency in a native T-type calcium channel nucleic acid, e.g. to treat cardiomyopathy, epilepsy, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           181

Voltage gated channels are membrane bound proteins formed of several subunits. The large alpha a pore in the membrane that is selective for a given ionic a alpha subunit contains 4 domains (I, II, III and IV) and contains 6 putative transmembrane helical segments (S1-S6). The sace activated at a lower voltage than L- or N-type aracteristics of T-type channels include short current time, ion kinetics near threshold, fast inactivation kinetics and trent. The sequences AAX83481-X83492 represent novel T-type channel genes from humans and rats. Each of the novel Ca channel genes from humans and rats. Each of the novel cannot a putative IVS4 region comprising the amino acid at a sea also disclosed for treating a disease or disorder thods are also disclosed for treating a disease or disorder ith a deficiency in a native T-type calcium channel nucleic treat cardiomyopathy, epilepsy, etc

This sequence represents a rat T-type voltage-gated calcium (Ca) channel alpha-1-G designated rCavTld. Voltage gated channels are membrane bound glycosylated proteins formed of several subunits. The large alpha subunit sormed of several subunits. The large alpha subunit sormed of several subunits. The large alpha subunit contains 4 domains (I, II, III and IV) and each domain contains 6 putative transmembrane helical segments (S1-S6). The cachannels are activated at a lower voltage than L- or N-type channels. Channels are activated at a lower voltage than L- or N-type channels. Channels are activated at a lower voltage than L- or N-type channels. Channels are threshold, fast inactivation kinetics and slow activation kinetics and tast the sequences AAX83492 represent novel T-type slow atil current. The sequences AAX83492 represent novel T-type voltage-gated ca channel genes from humans and rats. Each of the novel contains a putative IVS4 region comprising the amino acid sequence AAX14598. Cells expressing the T-type voltage-gated calcium channels. Methods are also disclosed for treating a disease or disorder associated with a deficiency in a native T-type calcium channel nucleic acid, e.g. to treat cardiomyopathy, epilepsy, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a protein that includes pancreatic T-type calcium channel alphal subunit derived from rat insulin secreting beta cell line, INS-1. The protein shows 96.3 % identity to the neuronal T-type calcium channel alphal subunit (alphalG). The T-type Ca2+ channel from INS-1 (alphalG-INS) and neuronal alphalG are alternative splice isoforms of the same gene. The INS-1 isoform is also expressed in brain, neonatal heart and kidney besides pancreatic beta cells. T-type Ca2+ channel belongs to the family of low voltage activated Ca2+ channels. The present sequence is used for treating diseases associated with abnormal expression or function of T-type calcium channels. They are especially used for treating type II diabetes. Modulators of pancreatic T-type Ca2+ channel e.g. antisense oligonucleotides, ribozymes and inhibitors are used in methods for modifying insulin secretion by pancreatic beta cells, basal calcium levels, potential L type calcium channel activity, pancreatic cell death, pancreatic beta cell proliferation and calcium influx through
                                                                                                                                      subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       encoding pancreatic T-type calcium channels used fo:
calcium channels and treatment of type II diabetes

Voltage gated channels are membrane bound glycosylated proteins formed of several subunits. The large alpha subunit sform a pore in the membrane that is selective for a given ionic species. Each alpha subunit contains 4 domains (I, II, III and IV) and each domain contains 6 putative transmembrane helical segments (S1-S6). The cach domain contains 6 putative transmembrane helical segments (S1-S6). The channels. Characteristics of T-type channels include short current time, slow activation kinetics near threshold, fast inactivation kinetics and slow tail current. The sequences AAX83481-X83492 represent novel T-type voltage-gated ca channel genes from humans and rats. Each of the novel contains a putative IVS4 region comprising the amino acid sequence AAY14598. Cells expressing the T-type voltage-gated calcium channels. Methods are also disclosed for treating a disease or disorder associated with a deficiency in a native T-type calcium channel nucleic acid, e.g. to treat cardiomyopathy, epilepsy, etc

The invention relates to isoform of human T-type low voltage activated calcium channel (alpha1G-c) cDNA and protein. Cells transformed with calcium channel DNA to express calcium alpha1G-c channel protein are used to identify specific modulators (antagonists or agonists). These modulators are useful as therapeutic agents and are used for treating wide range of calcium alpha1G-c channel-mediated disorders, e.g. stress epilepsy, schizophrenia, depression, sleep disorders, Cushing's disease, endocrine disorders, respiratory disorder, peripheral muscle disorder, muscle excitability, fertilisation, contraception, disorders involving hypertension, neuronal firing regulation, potentiation of synaptic signals and cardiovascular disorders (e.g. atherosclerosis, cardiac hypertrophy, angina pectoris). Calcium alpha1G-c channel DNA is useful for isolating and identifying related molecule mutations. It is also optionally used as antisoense sequences, in gene therapy. Calcium channel alpha1G-c DNA, protein and antibodies are useful for forensic analysis, diagnosis and epidemiological studies, by standard hybridisation or immunological assays. The present sequence is T-type low voltage activated calcium channel alpha1G-c protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5.
                                                                                                       Human T-type low voltage activated calcium channel alphalG-c; stress; epilepsy; schizophrenia; depression; sleep disorder; Cushing's disease; endocrine disorder; respiratory disorder; peripheral muscle disorder; muscle excitability; fertilisation; contraception; hypertension; neuronal firing regulation; cardiovascular disorder; gene therapy; forensic analysis; epidemiological study; neuroleptic.
                                                       Human T-type low voltage activated calcium channel alphalG-c protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleic acid encoding human calcium channel protein, useful for stifying specific modulators and potential pharmaceuticals for sting e.g. epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           105; Indels

                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a human T-type voltage-gated calcium (Ca) channel alpha-1-G designated hCavTlb. Voltage gated channels are membrane channel alpha-1-G designated hCavTlb. Voltage gated channels are membrane bound glycosylated proteins formed of several subunits. The large alpha subunit sform a pore in the membrane that is selective for a given ionic species. Each alpha subunit contains 4 domains (I, II, III and IV) and each domain contains 6 putative transmembrane helical segments (Si-S6). The cach domain contains 6 putative transmembrane helical segments (Si-S6). The cach domain contains of T-type channels include short current time, slow tail current. The sequences AAX83481-X83492 represent novel T-type coltage-gated Ca channel genes from humans and rats. Each of the novel CC channels contains a putative IVS4 region comprising the amino acid sequence AAX14598. Cells expressing the T-type voltage-gated calcium channels methods are also disclosed for treating a disease or disorder associated with a deficiency in a native T-type calcium channel nucleic acid, e.g. to treat cardiomyopathy, epilepsy, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   181

This sequence represents a human T-type voltage-gated calcium (Ca)
channel alpha-1-G designated hCavTld. Voltage gated channels are membrane
bound glycosylated proteins formed of several subunits. The large alpha
cubunits form a pore in the membrane that is selective for a given ionic
species. Each alpha subunit contains 4 domains (I, II, III and IV) and
cach domain contains 6 putative transmembrane helical segments (S1-S6). T
chype Ca channels are activated at a lower voltage than L- or N-type
channels. Characteristics of T-type channels include short current time,
slow activation kinetics near threshold, fast inactivation kinetics and
slow tail current. The sequences AAX83481-X83492 represent novel T-type
columels contains a putative IVS4 region comprising the amino acid
sequence AAY14598. Cells expressing the T-type voltage-gated calcium
channels. Methods are also disclosed for treating a disease or disorder
channels. Methods are also disclosed for treating a disease or disorder
associated with a deficiency in a native T-type calcium channel nucleic 209 301 181 GAAGAGSTEKDPGSADSEAEGLPYPALAPVVFFYLSQDSRPRSWCLRTVCNPWFERVSML MLGNVLLLCFFVFFIFGIVGVQLWAGLLRNRCFLPENFSLPLSVDLEPYYQTENEDESPF VILLNCVTLGMFR PCEDIACDSQRCRILQAFDDFIFAFFAVEMVVKMVALGIFGKKCYLG DIWNRLDFFIVIAGMLEYSLDLONVSFSAVRTVRVLRPLRAINRVPSMRILVTLLLDTLP Gaps oe voltage-gated calcium channel; membrane; pore; ion; current; rat; screen; drug; cardiomyopathy; epilepsy. This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  181

The present sequence is given in a specification providing sequences and partial sequences for three types of mammalian (human and rat) T-type calcium channel subunits. An expression cassette has been generated which comprises a nucleotide sequence encoding a T-type calcium channel alpha_1 subunit operably linked to control sequences to effect its expression. The novel calcium channel nucleic acids and proteins are useful for treating conditions characterised by undesirable levels of T-type calcium channel activity such as cardiac hypertrophy, cardiac arrhythmia, hypertension, sleep disorder and epilepsy
  rhythmic; anticonvulsant; hypotensive; cardiant; nootropic; n channel subunit; cardiac hypertrophy; cardiac arrhythmia; sleep disorder; epilepsy; alpha-IG T-type calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VILLNCYTLGMFRPCEDIACDSQRCRILQAFDDFIFAFFAVEMVVKMVALGIFGKKCYLG

and

treating disorder

The present sequence is given in a specification providing sequences and partial sequences for three types of mammalian (human and rat) T-type calcium channel subunits. An expression cassette has been generated which comprises a nucleotide sequence encoding a T-type calcium channel alpha_1 subunit operably linked to control sequences to effect its expression. The novel calcium channel nucleic acids and proteins are useful for treating conditions characterised by undesirable levels of T-type calcium channel as cardiac hypertrophy, cardiac arrhythmia, hypertension, sleep disorder and epilepsy Sequence 2359 AA;

The present sequence represents the the alpha 1H-1 subunit of a human low voltage activated calcium channel. The sequence was deduced from cDNA coltage activated from a TT cell cDNA library. The invention provides calcium channel subunits, including 2 splice variants of alpha 1H-1 (see also AAY06298), and isoform alpha 1H-2 (see AYY06300). The 1H-1 splice variants were detected by RT-PCR in multiple tissues. They differ only at amino acid 2230, being either Asp or Glu. 1H-2 has a 319-amino acid deletion in the I-II intracellular loop relative to 1H-1. Cells and vectors containing nucleic acids encoding these subunits, and methods for identifying compounds that modulate the activity of calcium channels that contain the subunits are provided by the invention. Such compounds are used to treat calcium channel mediated disorders, including neurological, endocrinological, cardiovascular, urological, hepatic, respiratory and vascular disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               486

Patent No. 6040436

GENERAL INFORMATION:
APPLICANT: France, Rodrigo
APPLICANT: Sun Chen, Ai Ru
APPLICANT: Suey, David U.
TITLE OF INVENTION: NUCLEIC ACID ENCODING HUMAN NEURONAL
TITLE OF INVENTION: CALCIUM CHANNEL SUBUNITS
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hamilton, Brook, Smith & Reynolds, P.C.
STREET: Two Militia Drive
CITY: Lexington
STATE: MA
COUNTRY: USA
ZIP: 02173-4799
COMPUTER: ISM PC compatible
COMPUTER: ISM PC compatible
COMPUTER: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/713,118
FILING DATE: 16-SEP-1996
CLASSIFICATION: 435

AAPPLICATION: ASP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length
